

# Problem Statement: Bus Ticket booking platform

You need to build a website similar to [RedBus](#) for booking bus tickets. The list of features listed below are required and you can add more features if you feel its required

1. Page to filter bus based on origin, Destination, and date
2. a way to enter personal details after selecting the bus
3. Confirmation page and Email after successfully booking the tickets

These are the restrictions on the tech-stack

1. Api needs to built using Node.js
2. Front end should needs to be built using React.js
3. Database can be either mongodb or SQL

finally, push the source code on a private repo in gitlab/github and share it with us
